- 1. Industria Chimica de Stat #11 is located on Strada Baicului, in Bucharest, at its extreme northeastern end, where it terminates on the shore of Lake Fundeni. Strada Baicului runs generally SW-NE, past the front gate of the plant, coming to a dead end on the shore of Lake Fundeni just east of the plant. On the west of the plant area, an unnamed road branches off from Strada Baicului, forming the west boundary of the plant area. Thus, the unnamed road, Strada Baicului, and Lake Fundeni form the west, south, and east boundaries of the plant area, respectively. The northern boundary of the area has not been described. The whole area appears to be about 100 by 100 meters in dimensions.
- 2. A six-foot fence runs along the south and west sides of the plant area. At the main entrance to the grounds, on the south side, there is a gate, beside which a guard or gatekeeper is apparently always present. The guard is not in uniform and is not apparently armed. No other security measures have been reported.
- 3. The main building of the plant is a two-story building about 30 meters long by 20 meters wide. It has the appearance of a former dwelling house. A small attic-type structure projects from the center of the roof about three meters. Around this building are grounds which have not been described.
- 4. About 15 meters east of the main building there is another building, which appears to be square, and about seven meters high. No windows are visible in this structure, but it appears to have a door. Connected with it, there is a thin, black, metal smokestack about nine meters high.
- 5. A few meters off Strada Baicului, along the unnamed road forming the western boundary of the plant area, there is a drilling operation in progress inside the fence. This could be a well-drilling project, since at one time the equipment for drilling was set up.
